Part 2: the rules

0.2.8-beta.17 · measured from the page itself · light

1 · Fonts

Served by CalendarStream (no Google Fonts). Plex Mono only where you copy or type something exactly.

IBM Plex Sans · **Module title 17** · Text 14 · 600 for labels · Notes 13, muted · `standard: --font`

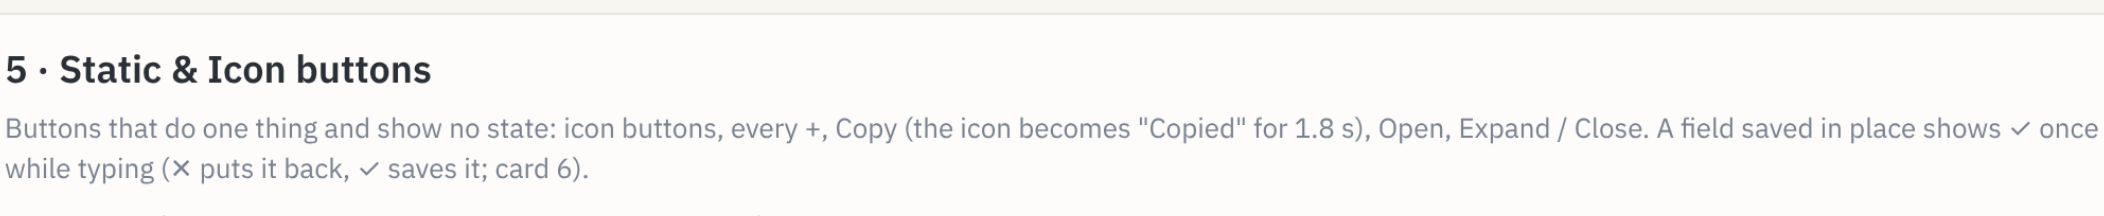
`IBM Plex Mono` · `https://example.org/work.ics` · `U123456` · `123-abc.apps.googleusercontent.com`

`typed: --mono · links, IDs, Username, client ID, stream name`

Username: U123456 · Password: Saved (leave empty to keep it) · ✓ Validated

2 · Website color palette (tokens in _theme.html)

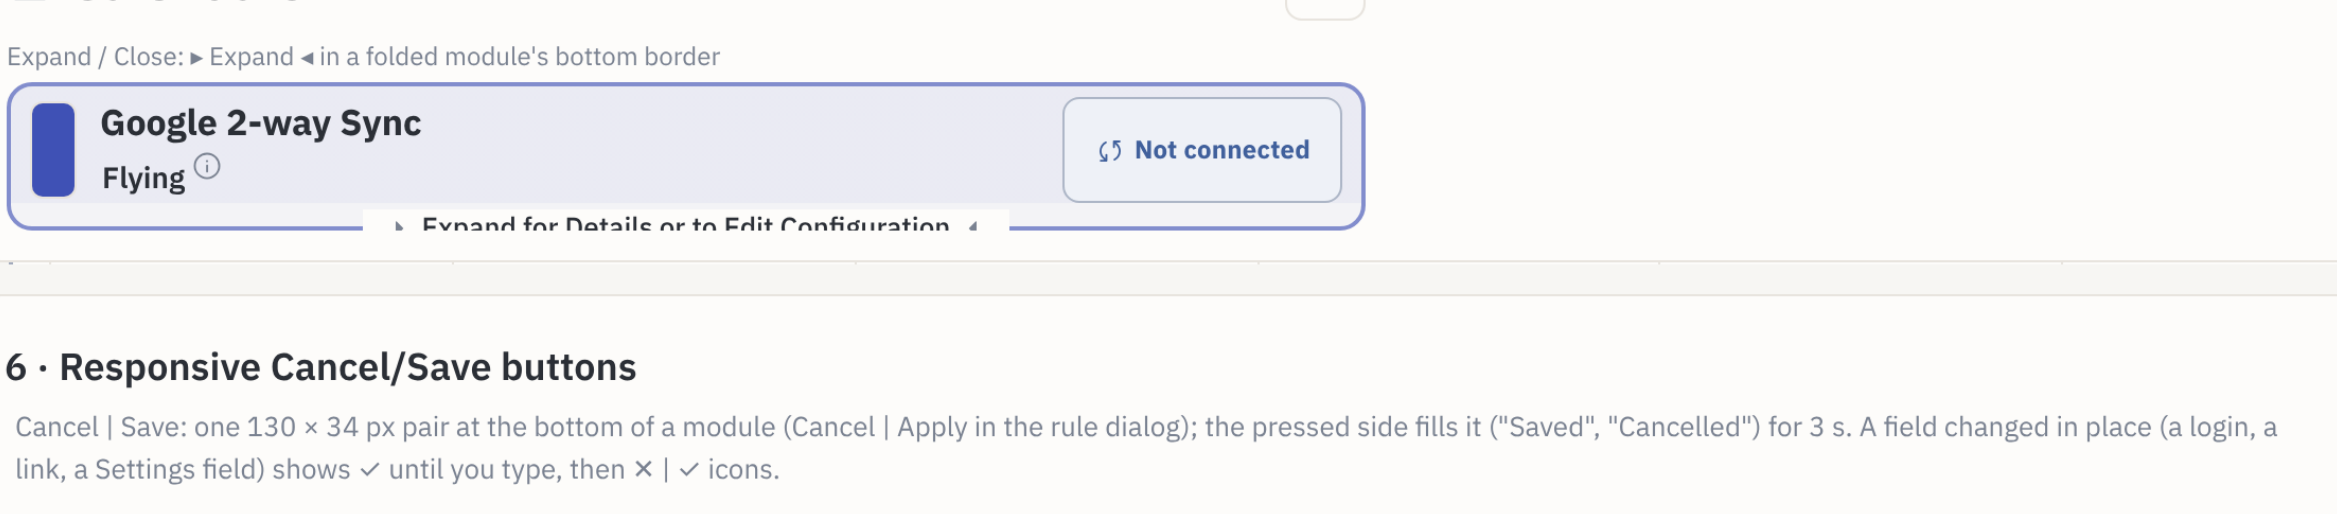
Each has a light and a dark value; the theme switch or the device picks one.



Token	Value
--bg	#f7f6f3
--card	#fdfcfa
--soft	#f1efeb
--line	#e8e4de
--text	#2b2f36
--muted	#7a8291
--accent	#40609c
--ok	#2f7d62
--okbg	#eef5f0
--warn	#946a24
--warnbg	#faf3e6
--bad	#b4483c
--badbg	#faeeeb
--run	#40609c
--runbg	#eef1f7

3 · Icons: Material Symbols (Rounded, weight 400)

Apache License 2.0 · drawn inline from app/material_symbols/symbols.json · 13–24 px, in the text color.



add	add_reaction	alarm	alarm_on	arrow_back	arrow_drop_do...	arrow_drop_up	arrow_right

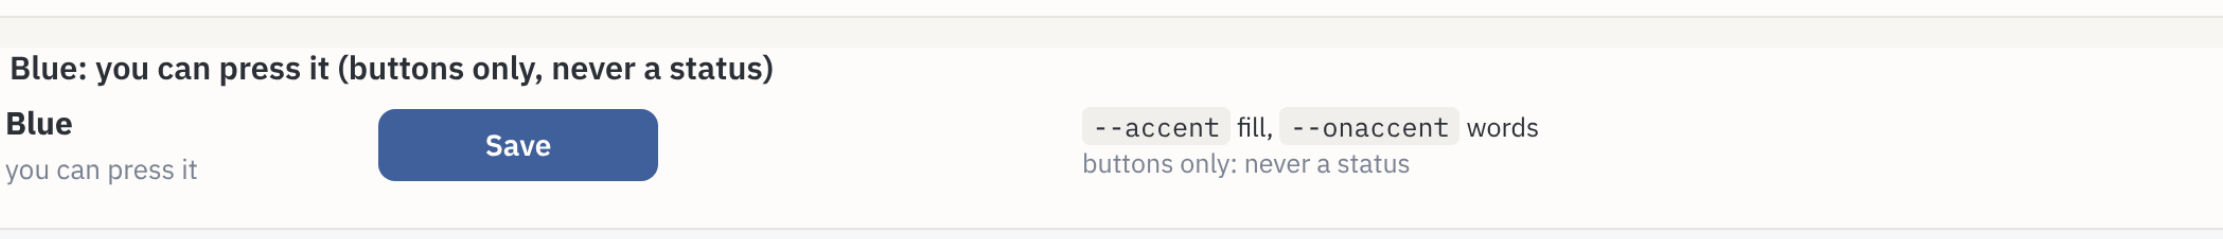
visibility	visibility_off	warning					

4 · Corners: rounded rectangles only, no pills

Controls 8 px (--r) · sections, modules, dialogs and menus 12 px (--rbox) · small marks (color, today, switch) 4–6 px.



5 · Static & Icon buttons

Buttons that do one thing and show no state: icon buttons, every +, Copy (the icon becomes "Copied" for 1.8 s), Open, Expand / Close. A field saved in place shows ✓ once saved, then ✕ | ✓ while typing (✕ puts it back, ✓ saves it; card 6).

Icon buttons (34 × 34 px, the icon muted, --soft behind it on hover): language, light / dark / system, ☰

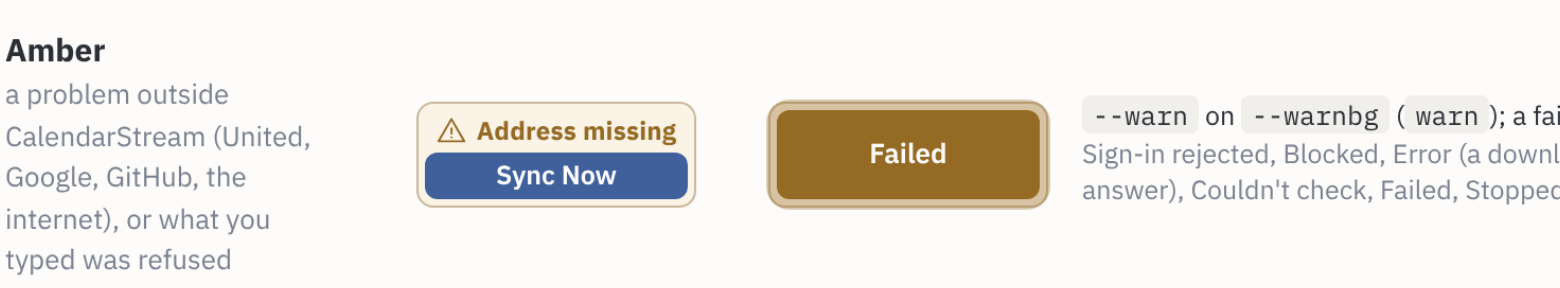
Not connected
Expand for Details or to Edit Configuration

Every +, and the (?) beside a title

Expand / Close: ▸ Expand ◂ in a folded module's bottom border

6 · Responsive Cancel/Save buttons

Cancel | Save: one 130 × 34 px pair at the bottom of a module (Cancel | Apply in the rule dialog); the pressed side fills it ("Saved", "Cancelled") for 3 s. A field changed in place (a login, a link, a Settings field) shows ✓ until you type, then ✕ | ✓ icons.



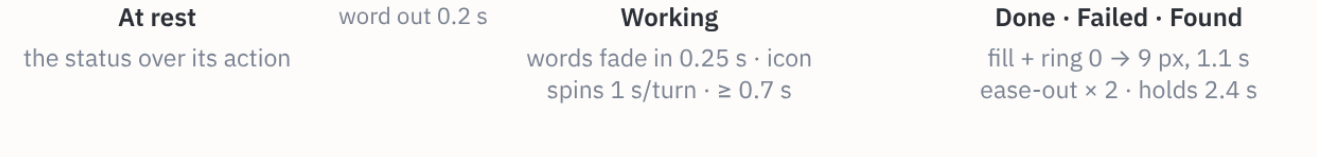
Cancel | Save · 130 × 34 · after Cancel · ✓ Validated · 80 × 28 · Settings: ✓ Saved · typing: ✕ | ✓ (icons only)

Blue: you can press it (buttons only, never a status)

Blue you can press it	Save	`--accent` fill, `--onaccent` words buttons only: never a status

7 · Responsive Status/Action buttons (Sync Now is the model)

132 × 50 px, one size everywhere: the status over the action that updates it. Sync Now → Syncing... (spinning) → Synced (green pulse) or Failed (amber pulse; red if CalendarStream failed) → Sync Now after 2.4 s. While working, the status word fades out and the button grows over the whole box (0.25 s); then it shrinks back before the new word fades in. Transitions: cards 12 and 14.



Sync Now · Syncing... · Synced · green pulse · Failed · amber pulse

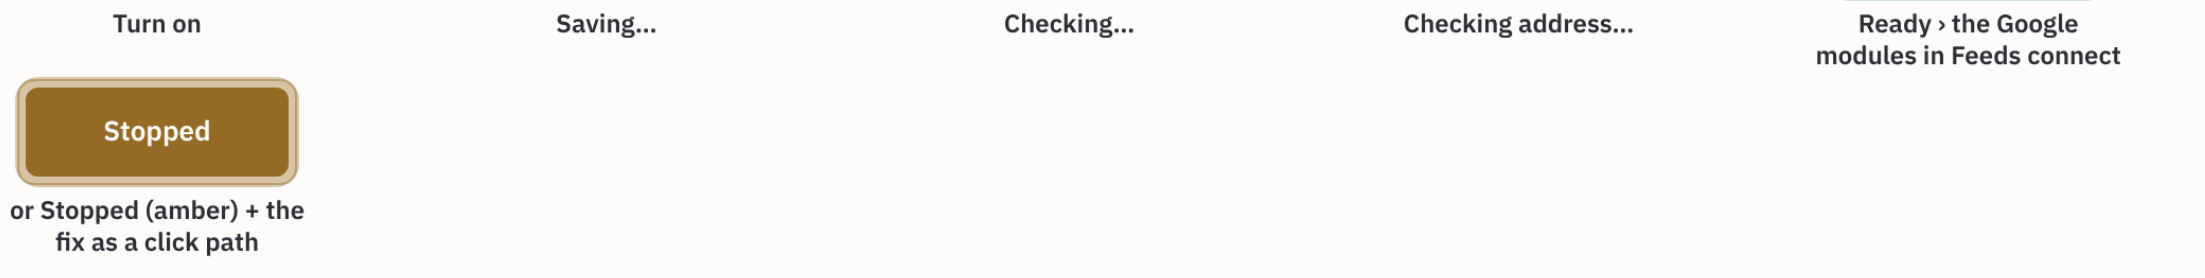
One look per meaning: Green, Pressed, Amber, Red

A status looks one way for one meaning, everywhere: chip, status box, a button's done or failed state. Blue fills are buttons only, never a status.

Meaning	Status box	Button	Tokens and words
Green done, OK	✓ Healthy Sync Now	Synced	`--ok` on `--okbg` (`good`); a done button fills `--ok` with a green pulse Healthy, Connected, Read by Google, Up to date, Synced, Updated, Saved, N Rules, N Templates
Pressed in action, or waiting on you	Not connected Sync Now	Syncing...	`--run` words on `--runbg` (`run`); a working button is `--card` with `--run` words Syncing..., Checking..., Downloading..., Restarting..., Starting, Update found, Update available, Ready to connect, Not checked, Not set up, Not connected, Not read yet, Setup needed, Paused, N to check (rule conflicts)
Amber a problem outside CalendarStream (United, Google, GitHub, the internet), or what you typed was refused	⚠ Address missing Sync Now	Failed	`--warn` on `--warnbg` (`warn`); a failed button fills `--warn` with an amber pulse Sign-in rejected, Blocked, Error (a download), Address missing, Client rejected, Sync problem (Google's answer), Couldn't check, Failed, Stopped, Unhealthy, a refused Save ("Not a valid regex...")
Red CalendarStream itself failed	Internal error Sync Now	Update failed	`--bad` on `--badbg` (`bad`); a failed button fills `--bad` with a red pulse (`data-cause="inside"`) Internal error, Sync problem (Google sync failed inside), Update failed

Status/Action button transitions, frame by frame

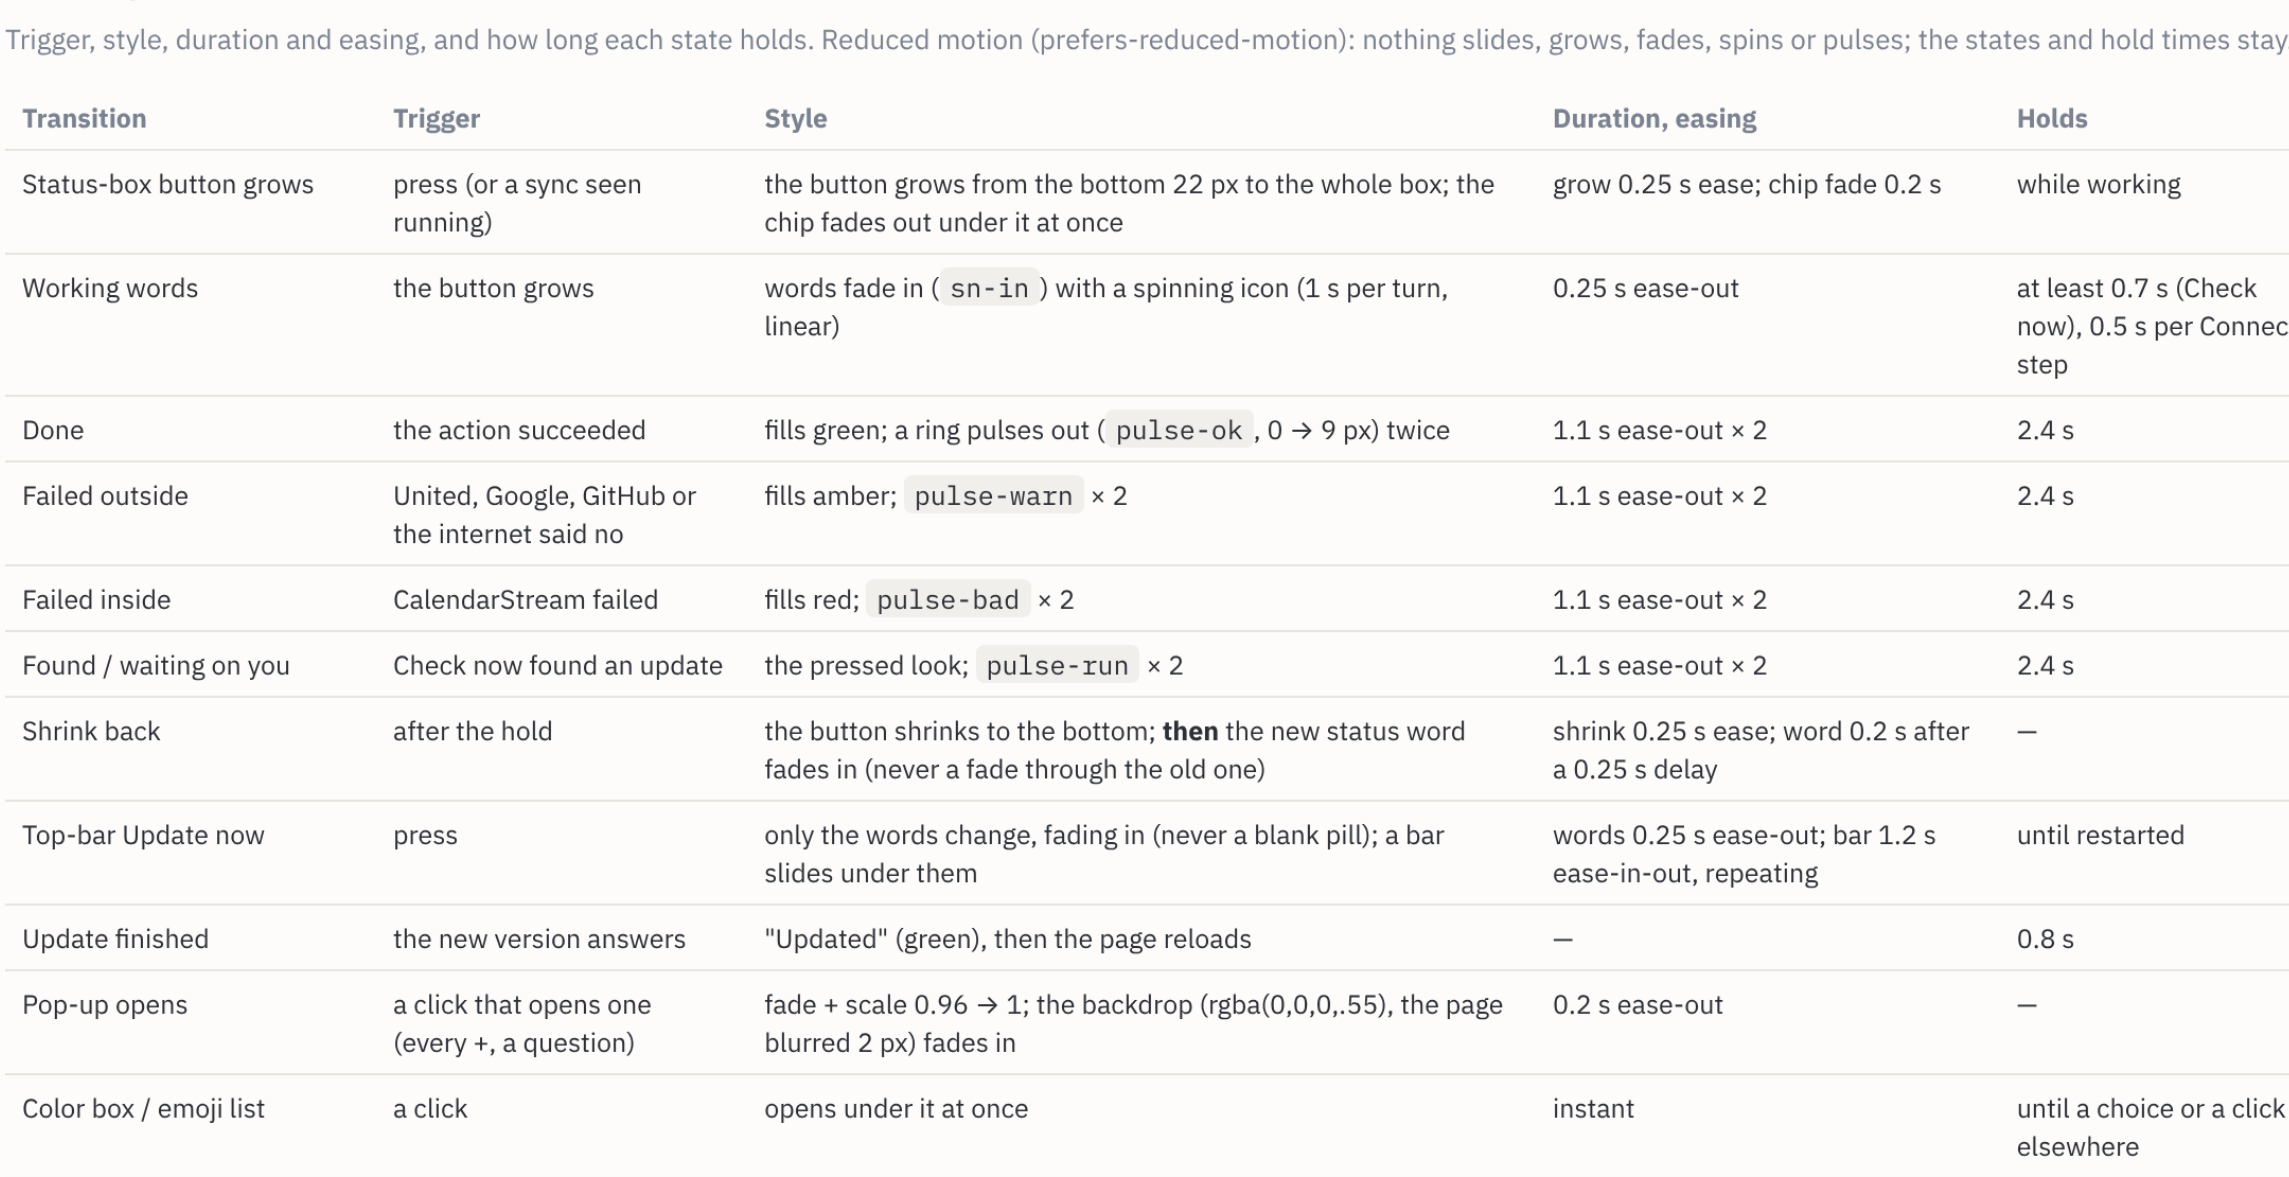
Every status-box button (Sync Now, Check now, Update now, Connect) moves like this. Reduced motion: the same frames, no movement between them.



- **At rest** — the status over its action
- **Working** — words fade in 0.25 s · icon spins 1 s/turn · ≥ 0.7 s
- **Done · Failed · Found** — fill + ring 0 → 9 px, 1.1 s ease-out × 2 · holds 2.4 s
- **Shrinking** — the button goes back to the bottom; no word yet
- **Redrawn** — the new status fades in (never through the old one)

Flows: the words, in order

Every copy of an action (top bar and Settings; Feeds and Settings) says the same words at the same moment and ends together.



Sync Now: Sync Now → Syncing... → Synced (green) → or Failed (amber) → redrawn

Check now (Settings › Updates): Check now → Checking... → Up to date (green) → or Update found (pressed) → redrawn: Update available

Update now (top bar and Settings, together): Update now → Downloading... → Restarting... → Updated (green) → or Update failed (red)

Turn on (Settings › Google Calendar API Sync): Turn on → Saving... → Checking... → Checking address... → Ready › the Google modules in Feeds connect → or Stopped (amber) + the fix as a click path

Update finished: the page reloads 0.8 s after "Updated", so the new version runs its own parts. The top bar's pill changes words only (they fade in 0.25 s): it is never blank.

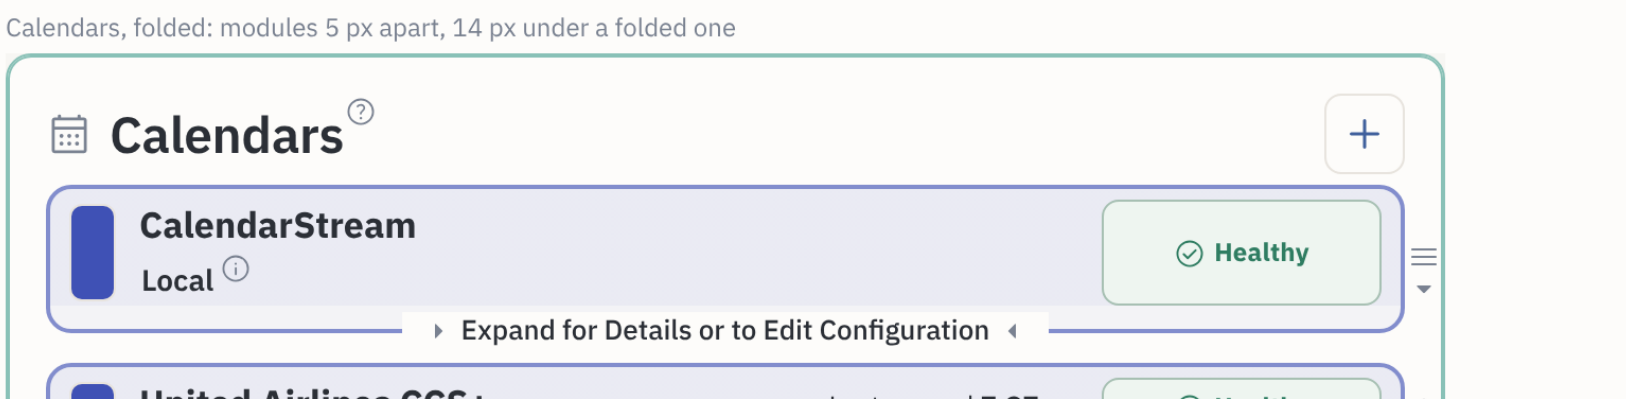
8 · Every transition

Trigger, style, duration and easing, and how long each state holds. Reduced motion (prefers-reduced-motion): nothing slides, grows, fades, spins or pulses; the states and hold times stay.

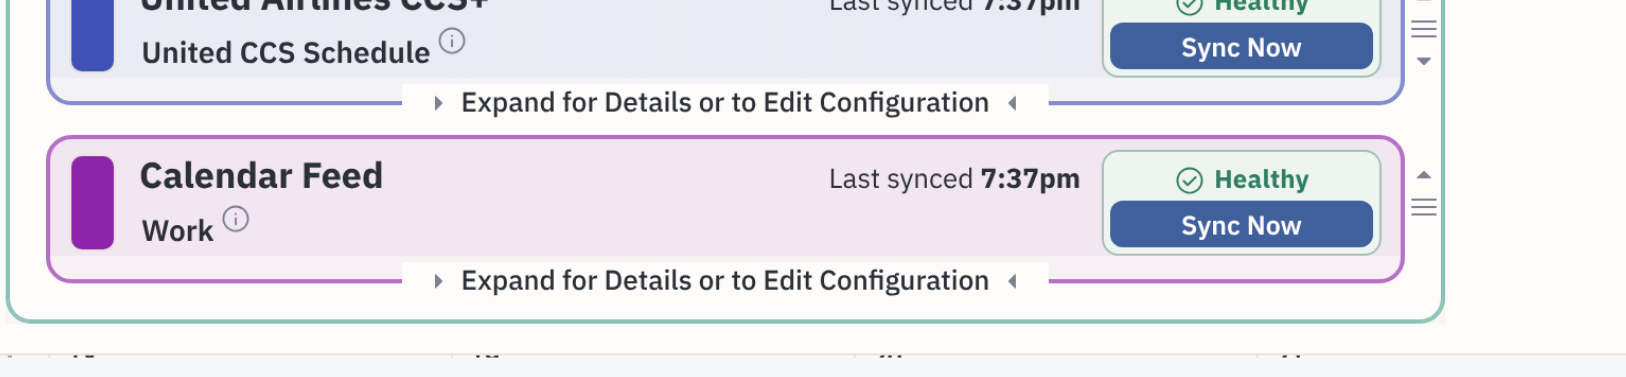
Transition	Trigger	Style	Duration, easing	Holds
Status-box button grows	press (or a sync seen running)	the button grows from the bottom 22 px to the whole box; the chip fades out under it at once	grow 0.25 s ease; chip fade 0.2 s	while working
Working words	the button grows	words fade in (`sn-in`) with a spinning icon (1 s per turn, linear)	0.25 s ease-out	at least 0.7 s (Check now), 0.5 s per Connect step
Done	the action succeeded	fills green; a ring pulses out (`pulse-ok`, 0 → 9 px) twice	1.1 s ease-out × 2	2.4 s
Failed outside	United, Google, GitHub or the internet said no	fills amber; `pulse-warn` × 2	1.1 s ease-out × 2	2.4 s
Failed inside	CalendarStream failed	fills red; `pulse-bad` × 2	1.1 s ease-out × 2	2.4 s
Found / waiting on you	Check now found an update	the pressed look; `pulse-run` × 2	1.1 s ease-out × 2	2.4 s
Shrink back	after the hold	the button shrinks to the bottom; **then** the new status word fades in (never a fade through the old one)	shrink 0.25 s ease; word 0.2 s after a 0.25 s delay	—
Top-bar Update now	press	only the words change, fading in (never a blank pill); a bar slides under them	words 0.25 s ease-out; bar 1.2 s ease-in-out, repeating	until restarted
Update finished	the new version answers	"Updated" (green), then the page reloads	—	0.8 s
Pop-up opens	a click that opens one (every +, a question)	fade + scale 0.96 → 1; the backdrop (rgba(0,0,0,.55)), the page blurred 2 px) fades in	0.2 s ease-out	—
Color box / emoji list	a click	opens under it at once	instant	until a choice or a click elsewhere
Regex test box	typing	✓ / ✕ redrawn	300 ms after the last key	—
Cancel | Save	press	the pressed side grows over the pair (flex) and fades its words	0.3 s ease	3 s, then idle
Field saved in place	Save	✓ fades in (`slotfade`)	0.45 s ease (messages 0.3 s)	until typing
Expand / Close	press	the triangles turn (Close points up)	0.15 s	—
Copy	press	the icon becomes "Copied"	instant	1.8 s
Calendar search	typing	results after a pause	300 ms debounce	—

9 · Modules: every calendar and feed

A 50 px header is all a folded module shows. Folded: no line under it; Expand sits in the bottom border. Line 1: the kind (fixed, 17 px); line 2: the name, with a raised (i) when it has a note. Expanded: a Close line under the header; the color and name become fields (the color box changes the color only then) and the Note field shows under Close. Its handle sits in the section's right margin, so the module is as wide as the section header.



Expanded: the header's title and note become fields, and the Close bar sits under it:

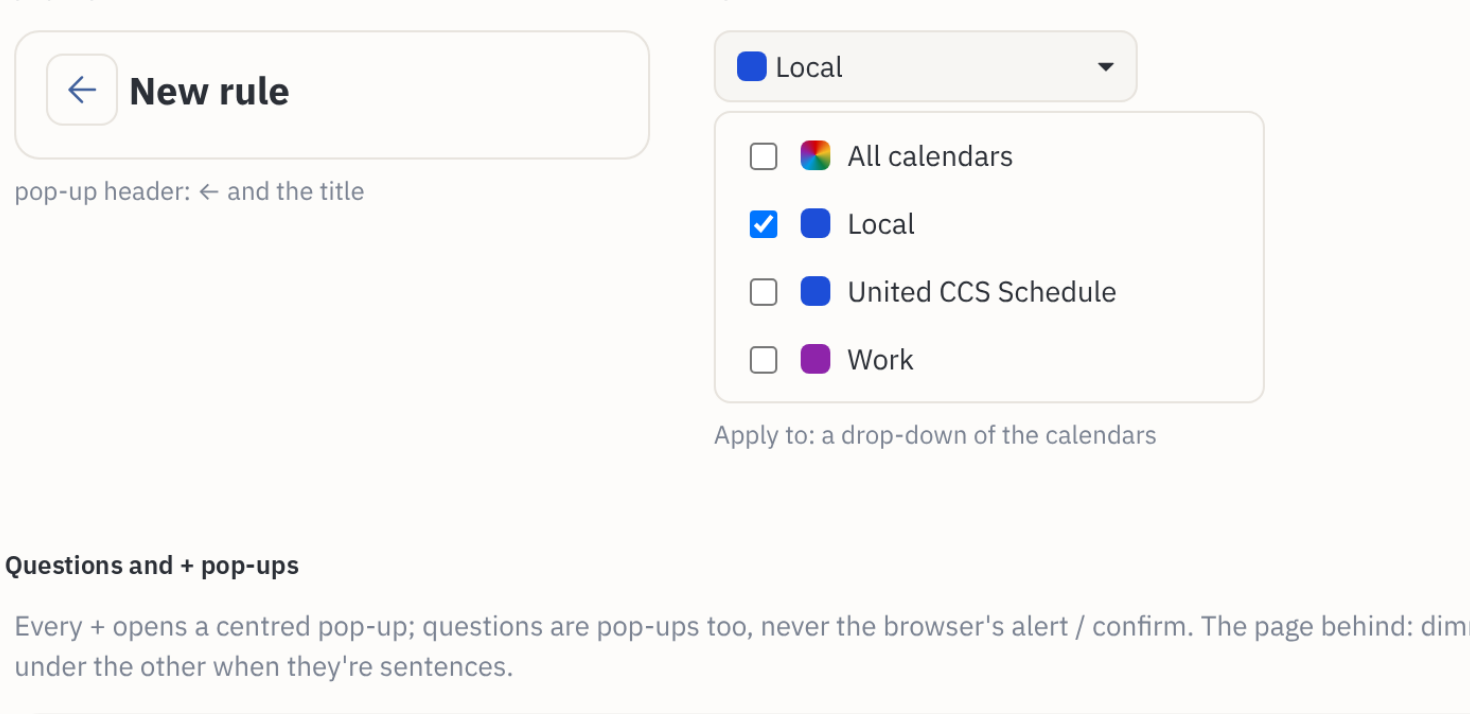


`header`	716 × 50 px · gap 10 · module padding 6 10 12
`color`	22 × 46 px · 6 px corners
`kind / name`	kind 270 × 24 px · 17/700, plain text · name 253 × 24 px · 14/600, 6 px corners · (i) note after it when there is one
`status lines`	13 px, 20 px lines, on the right by the status · "Last synced 11:24am" over "Next check @ 12:24pm" · a line with nothing to say is blank
`status box`	132 × 50 px · the same in every module · 8 px corners
`Sync Now`	124 × 22 px · the same in every module
`Expand / Close`	centred on the bottom border (folded) · 13 px · ▸ ◂ turn down and it says Close when open · Cancel also closes
`between modules`	5 px · 14 px under a folded one (room for Expand)
`Default`	the top calendar: "Default" at the top right of its expanded module

Spacing

5 px between parts (sections, modules, the parts of a module or a pop-up, buttons in a row); 2 px between a label and its field; 9 px inside a module's border at the sides, 5 px top and bottom; 12 px inside every pop-up; nothing else, except 14 px under a folded module for its Expand line. In app/styles/17-spacing.css, last, so it wins.

Calendars, folded: modules 5 px apart, 14 px under a folded one



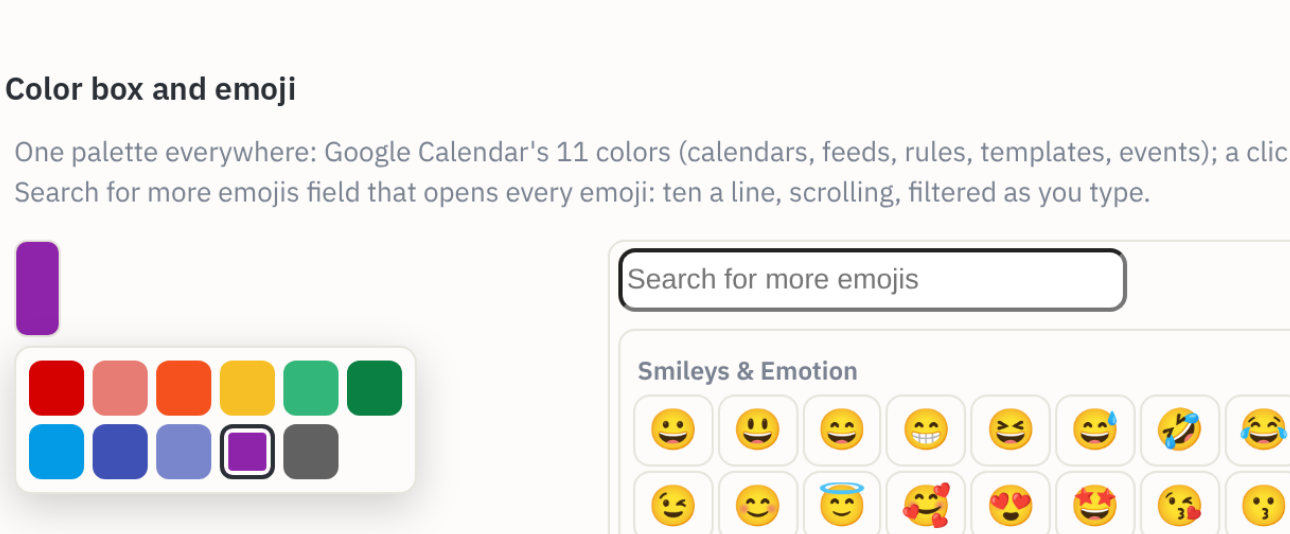
10 · Handles: the order of modules and rules

On the right of every module (in the section's right margin, taking no extra space) and rule line: ▲ above, ☰ to drag, ▼ below (none above the first or below the last). The order is saved at once: the calendars' (the top one is the Default), the feeds', the rules' priority.

Items without an end time → Change length to 1:00 — All calendars

11 · Pop-ups and drop-downs

On a computer, adding or editing an event, a rule, Print Preview and removing a calendar open in a pop-up (12 px corners, 18 px padding) with ← and its title; on a phone (≤ 700 px) the pop-up is the whole screen. A choice of calendars is a drop-down of ticks, each calendar with its color.



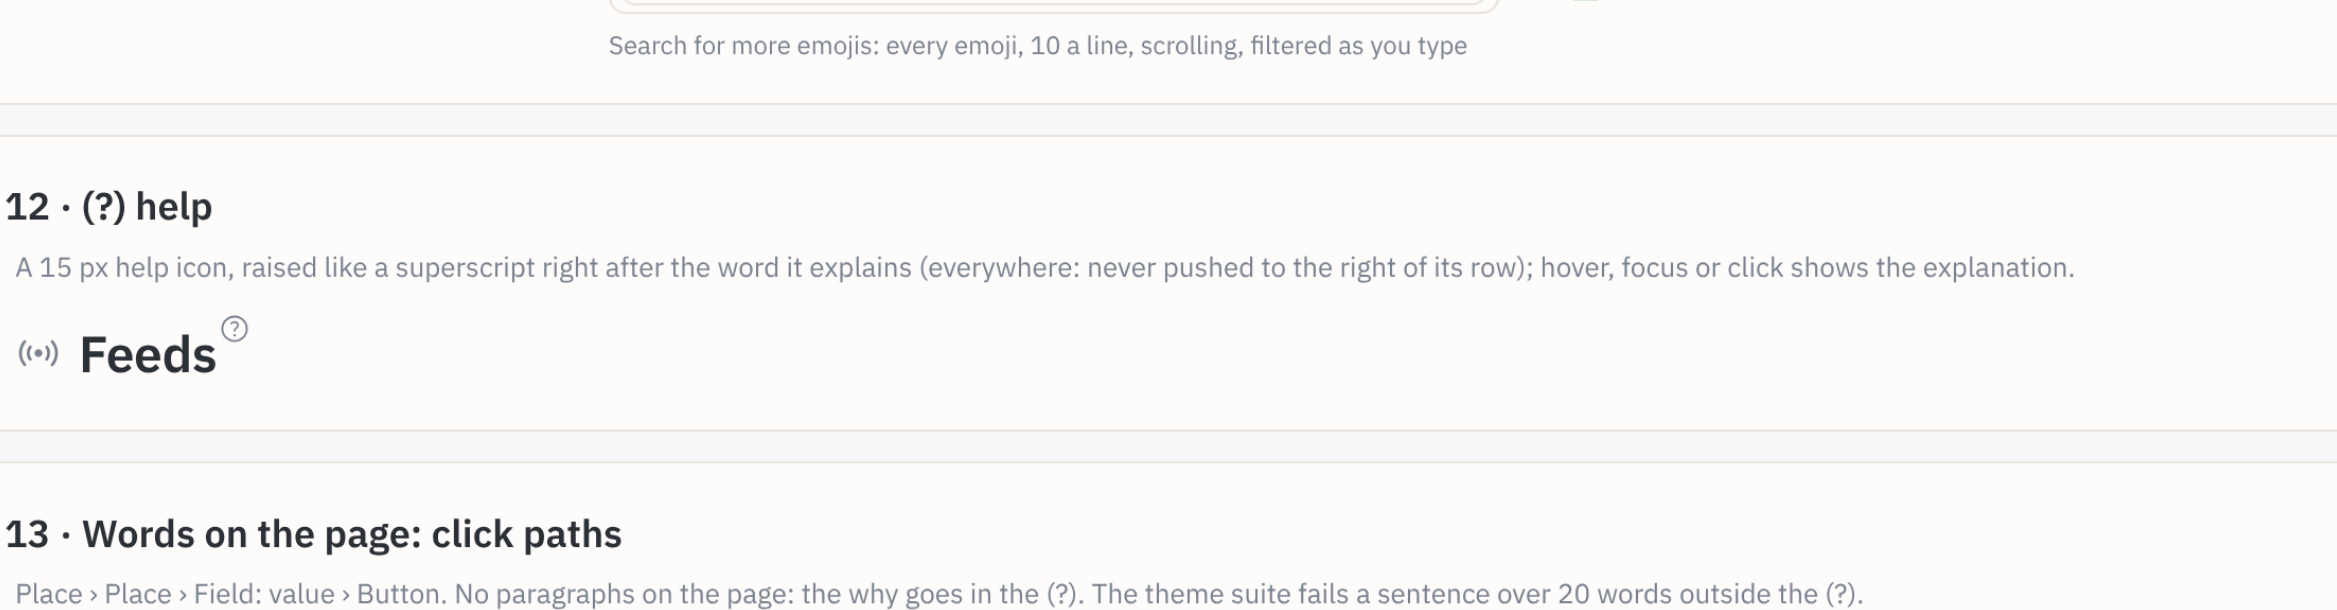
pop-up header: ← and the title

☐ All calendars
☑ Local
☐ United CCS Schedule
☐ Work

Apply to: a drop-down of the calendars

Questions and + pop-ups

Every + opens a centred pop-up; questions are pop-ups too, never the browser's alert / confirm. The page behind: dimmed (rgba(0,0,0,.55)) and blurred 2 px. Answers on one line, or one under the other when they're sentences.



Delete this rule? It's removed from every calendar that uses it.

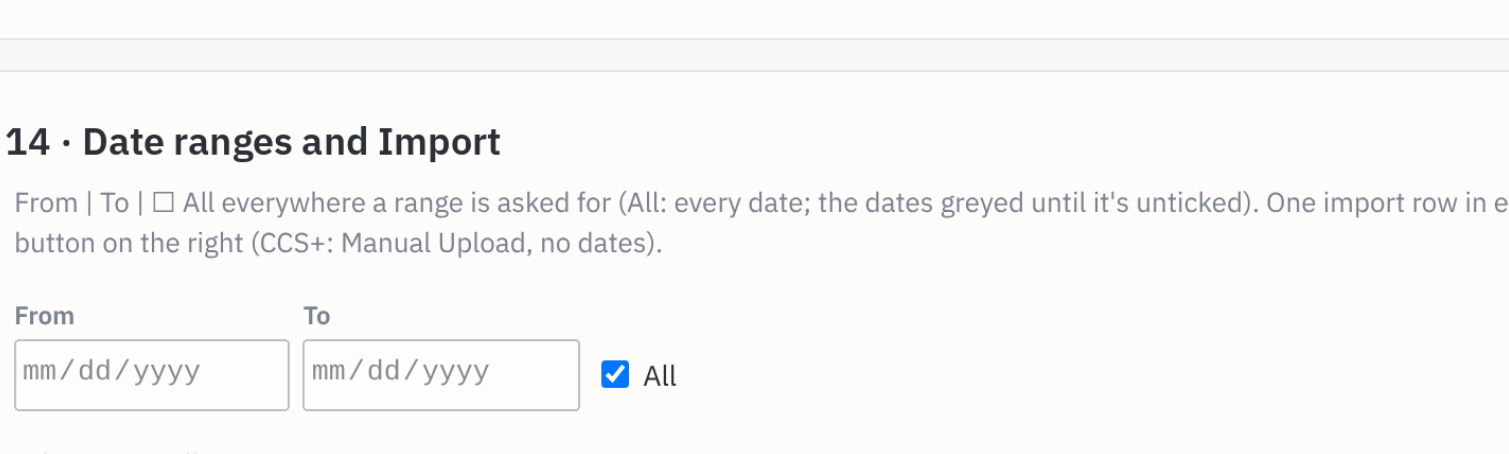
Cancel · Yes

Are you certain you'd like to remove this Google Calendar module from CalendarStream?

- Yes. Remove the module, and delete the United Airlines Schedule from Google Calendar
- Yes. Remove the module, but leave the United Airlines Schedule on Google Calendar
- No, I changed my mind

Color box and emoji

One palette everywhere: Google Calendar's 11 colors (calendars, feeds, rules, templates, events); a click opens it (in a module, while expanded). Emoji: the common ones, then a rounded Search for more emojis field that opens every emoji: ten a line, scrolling, filtered as you type.



color box, open

Search for more emojis: every emoji, 10 a line, scrolling, filtered as you type

Palette: name and code (Google Calendar's 11 colors)

Name	Code
Tomato	#d50000
Flamingo	#e67c73
Tangerine	#f4511e
Banana	#f6bf26
Sage	#33b679
Basil	#0b8043
Peacock	#039be5
Blueberry	#3f51b5
Lavender	#7986cb
Grape	#8e24aa
Graphite	#616161

12 · (?) help

A 15 px help icon, raised like a superscript right after the word it explains (everywhere: never pushed to the right of its row); hover, focus or click shows the explanation.

Feeds (?)

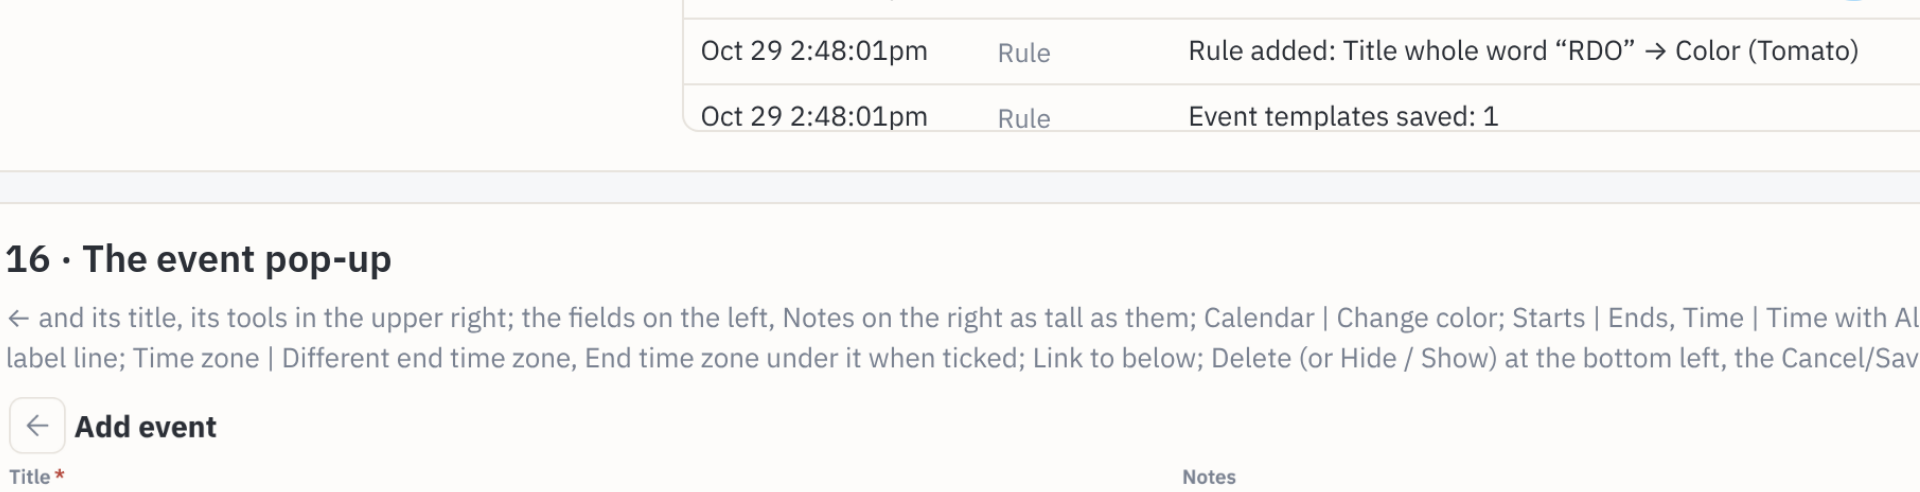
13 · Words on the page: click paths

Place › Place › Field: value › Button. No paragraphs on the page: the why goes in the (?). The theme suite fails a sentence over 20 words outside the (?).

Yes	No
Google Cloud › Clients › CalendarStream › Authorized redirect URIs › + Add URI › Save › wait 5 min › Connect. ☰ Settings › Public address: this page's https:// address › Save. Greyed out? Test users › + Add users › your Gmail › Save.	To fix this, open Google Cloud, go to the Clients page and pick the CalendarStream client, then under Authorized redirect URIs (not JavaScript origins) press + Add URI, paste the address from step 6 and press Save, and wait about five minutes before you try again.

14 · Date ranges and Import

From | To | ☐ All everywhere a range is asked for (All: every date; the dates greyed until it's unticked). One import row in every calendar: heading, the file field filling the line, the dates, the button on the right (CCS+: Manual Upload, no dates).



From: mm/dd/yyyy · To: mm/dd/yyyy · ☑ All

a date range: All

Import: Choose Calendar.ics... · mm/dd/yyyy · mm/dd/yyyy · ☑ All · Import

Manual Upload: Choose Calendar.ics... · Upload & publish

15 · Deleted events and History

A deleted event stays, struck through and greyed, saying where it was deleted, with Restore, until its Undo pops off History. History: Time | Type | Event | Undo, a filter on top; folded, the latest lines with Undo / Redo (a stack: newest first).

Clarifications

The Developer's decisions, kept in build_rules/theme.md → Clarifications. Always follow them.

1. Module handles (▲ ☰ ▼) sit in the section's right margin: they take up no extra space, and modules (and All Rules' lines) are as wide as the section header (their right edge lines up with its +). No handle where there's nothing to reorder (a list of one). (Picture 2·7)
2. Calendar and feed module headers share one layout. Line 1: the color (calendars only), the module's kind (fixed text, 17 px, 15 on a phone where it may take two lines: CalendarStream, United Airlines CCS+, Google Calendar, Apple Calendar, Calendar Feed...), then on the right "Last synced 00:31" and the status box (Healthy...). Line 2: its label (plain text; a field while expanded) with a raised (i) after it (what it is, and its note, changed under Close), then on the right "Next check @ 00:44" and Sync Now. A line with nothing to say is left blank. (Picture 2·4)
3. Status words: "Last synced 00:31" or "Sync failed 00:31", never "Last check was successful @..."; a feed says "Last read by Google 00:31" (or "Last read ..."); Settings → Updates "Last checked 00:31". (Picture 2·4)
4. The status box is a multi-button: an overall status over the action that updates it ("Healthy" over Sync Now on United Airlines CCS+ is the model). Wherever an overall status and its update share a box, it works the same: every button in a status box (Sync Now, Settings → Check now, Update now, Connect, any new one) says what it's doing at once (Syncing..., Checking..., Downloading...) and grows over the box as the status word fades, then pulses (done, failed or found, in its look) for 2.4 s, then shrinks back before the new status word fades in. Never a button that gives no sign it was pressed, and never a status left showing while its update runs. (Pictures 2·5, 2·12)
5. One look per meaning, everywhere: green is done or OK; the pressed look (blue words on the box) is in action or waiting on you; amber is a problem outside CalendarStream (United, Google, GitHub, the internet); red is CalendarStream itself failing; blue fills are pressable buttons only. (Picture 2·11)
6. Module-like sections (All Rules, Event Templates): the count box in the top right corner; + in the bottom right corner of the open section. (Part 1)
7. A box means you can change it: fixed text (a title, the release channel) is plain text, never in a field box. A group that looks like a module but has nothing to fold (Settings → Updates) uses the module header layout, always open, with no Expand. (Part 1)
8. Copy buttons sit inside their field, like the password box's eye. Client ID / secret pairs are laid out like a login, connected or not. (Picture 2·1)
9. Adding something (+ Add a calendar...) ends with the standard Cancel | Save pair, like editing it. (Picture 2·6)
10. After an update the page reloads, so the new version's script and stylesheet run its parts. (Picture 2·13)
11. Expand / Close lines: ▸ Expand ◂ points at the words; Close's triangles point up. (Picture 2·4)
12. Pop-ups: a dark backdrop (rgba(0,0,0,.55)) that keeps the page in view, out of focus (blurred 2 px), and a 200 ms fade and scale-up (none with reduced motion). Every Cancel | Save, pop-ups included, is the 130 × 34 pair. (Pictures 2·8, 2·14)
13. An opened event: Close in the bottom left corner, its icons (link, reminders, edit, duplicate, delete) on the right; when it's too narrow for one line, the icons go on a line above Close. (Part 1)
14. Events show the color Google shows: their own, their rule's, else their calendar's. (Part 1)
15. Rule lines say what the rule does, titled or not ("Items without an end time → Change length to 1:00"). (Picture 2·7)
16. Fields everywhere, pop-ups included: a 12 px muted label over a 34 px field, 2 px apart; a value that can't be changed (an event's calendar) is plain text. Related fields share a line (Calendar | Title, Location beside the event's color, link and duplicate; Starts | Ends, each with its Time under it). (Picture 2·1)
17. Every section's + is in a corner: the top right (Calendars, Feeds, the calendar), or the bottom right of an open module-like section. The calendar's search icon sits left of its Time Zone. (Part 1)
18. A credentials row (Client ID / secret) ends with a trash, which asks before deleting. A Settings group that works shows everything at once, nothing under Expand: its header (like Updates), its credentials row, and its Remove (red, lower left, like a module's) with its options beside it; the explanations go in its (?). (Picture 2·13)
19. One action, one state: when the same action appears in more than one place (Update now in the top bar and in Settings; Sync Now for Google in Feeds and in Settings), pressing any copy shows the same progress, in the same words, in every copy at once, and they all end together. (Picture 2·13)
20. A row of settings that belong together is one line (Check for updates [Hourly] ☐ Auto-update). (Part 1)
21. Google calendars say "Next push instantaneous" (each change goes at once). (Part 1)
22. A rule's color is one of Google Calendar's 11 event colors; rule lines read "Color ■ (Name)". (Picture 2·7)
23. Light is the Soft palette (warm off-white, muted blue accent), still named Light with its icon. (Picture 2·10)
24. In-page instructions are click paths (Settings › Google › New Project › Name: CalendarStream › Save), not paragraphs, everywhere on the site; the explanations go in the (?). (Picture 2·15)
25. Every date range has All: From | To | ☐ All (search, Print Preview, Import). (Picture 2·17) A feed module's Include says it in words instead: Dates (optional; empty = all), From over To (0.2.8-beta.17).
26. No browser alert or confirm boxes: every question and notice is the page's own pop-up. (Picture 2·18)
27. (i) is info (what the module is, then your note); (?) is help (how to). (Pictures 2·4, 2·9)
28. Every + opens a centred pop-up, the page dimmed and out of focus behind it. (Picture 2·18)
29. Modules have a 2 px border, with 1 px less padding all round, so they keep their size. (Picture 2·4)
30. A module's name is its label: plain text until the module is expanded, then a field of the same size. (Picture 2·4)
31. One color palette everywhere: Google Calendar's 11 colors, in the color box. (Picture 2·16)
32. A deleted event stays struck through and greyed, saying where it was deleted, with Restore, until its Undo pops off History. (Picture 2·19)
33. Importing a calendar file is one row in every calendar: heading, the file field filling the line, the dates, the button on the right (CCS+: Manual Upload). (Picture 2·17)
34. Emoji: the common ones, then a rounded "Search for more emojis" field that opens every emoji, ten a line, scrolling, filtered as you type. (Picture 2·16)
